

IILM UNIVERSITY GREATER NOIDA

Internship Topic/Title: AI Data Analytics & Research for NGO Outreach

Student Name: Abhinav Katiyar

Enrollment Number: 25SCS1003001318

Program & Semester: B.Tech CSE, Semester 3

Declaration & Acknowledgement

Candidate's Declaration

I, **Abhinav Katiyar**, declare this internship report is my original work, submitted in partial fulfilment of B.Tech CSE. All references have been quoted; no material has been copied from other sources, and this report has not been submitted to any other institute.

Acknowledgement

Gratitude is expressed to all who supported this internship — for their guidance, constructive criticism, and advice. Special thanks to my parents for their blessings.

Programme

AI Data Analytics Internship

5th – 22nd August 2026

Submitted To

School of Computer Science & Engineering

IILM University, Greater Noida

Introduction

NGOs depend heavily on effective outreach to connect with beneficiaries, volunteers, donors, and the wider community. In the digital era, large amounts of information are generated through social media, online campaigns, volunteer interactions, and surveys.

→ AI & Data Analytics

Transform raw information into useful insights for improving outreach and decision-making.

→ Internship Focus

Explored practical strategies to improve NGO outreach, volunteer engagement, fundraising, and online presence through a research-oriented, data-driven approach.

ORGANISATION PROFILE

InAmigos Foundation

InAmigos Foundation is the host organisation for this internship. The programme was oriented toward applying AI, data analytics, and research concepts to the context of NGO outreach and organisational growth.

Environment

Analytical thinking, digital tools, and AI-assisted approaches connected with social-impact objectives.

Focus

Using technology not only for technical tasks but also for improving communication, engagement, and decision-

Problem Statement

NGOs often face challenges in reaching the right audience, maintaining consistent engagement, understanding stakeholder interests, identifying effective communication channels, and measuring the impact of digital outreach.

The Core Challenge

Information from multiple sources exists, but without systematic analysis, converting raw data into actionable insights remains difficult.

The Goal

Explore how AI tools, data analytics, and structured research can support better NGO outreach — strengthening online presence, volunteer participation, and fundraising potential.

Project Objectives

01

Understand AI & Analytics in NGO Outreach

Study the role of AI and data analytics in NGO organisational growth.

02

Research Practical Strategies

Identify methods to improve outreach, volunteer engagement, fundraising, and online presence.

03

Identify Data Sources & Indicators

Determine useful engagement indicators and analytical approaches for evaluating outreach activities.

04

Explore AI-Assisted Methods

Use AI for content development, audience understanding, research, and communication.

05

Develop Structured Recommendations

Support more informed and effective decision-making through data-driven suggestions.

Scope of the Project

The internship covered the study and practical exploration of AI and data analytics for NGO outreach — including digital engagement practices, AI tools for idea generation, performance indicators, and recommendations for improving organisational communication.

- ❏ Future scope includes real-time dashboards, automated reporting, audience segmentation, predictive analytics, and advanced AI-based engagement systems.

Technologies & Tools Used

Tool / Technology	Purpose
AI Tools	Research, idea generation, content planning, analysis
Data Analytics	Organise information, identify patterns, compare indicators
Spreadsheet Tools	Structured data, observations, analytical summaries
Research Sources	Study NGO outreach and digital engagement methods
Documentation Tools	Compile findings and internship deliverables

System Architecture & Methodology

Data is collected from digital campaigns, social platforms, volunteer activities, and surveys – then organised, analysed, and synthesised with AI tools to guide outreach strategies, with performance monitoring providing feedback for future improvement.

- 1

Understand Requirements
Study internship objectives and the role of AI and analytics in NGO outreach.
- 2

Research & Information Collection
Explore relevant practices, digital engagement methods, and technology-based approaches for NGO growth.
- 3

Data & Insight Identification
Consider possible indicators related to outreach and engagement to support decision-making.
- 4

AI-Assisted Analysis
Use AI tools for organising ideas, identifying strategies, summarising research, and generating recommendations.
- 5

Recommendation Development
Convert observations into practical suggestions for outreach, volunteer engagement, fundraising, and online presence.
- 6

Review & Documentation

Expected Outcomes & Certificates

Expected Outcomes

- Improved understanding of AI and data analytics for NGO outreach
- More structured, data-informed planning for digital communication
- Better identification of useful performance indicators
- Practical ideas for volunteer engagement and stakeholder communication
- Support for fundraising and online-presence strategies
- Foundation for future expansion into dashboards, automation, and predictive analytics

Certificates Earned

- Certificate of Internship (Primary)
- Certificate of Best Intern
- Additional Certificate of Internship
- Certificate of Appreciation

All certificates issued by InAmigos Foundation, dated 05/08/2026, signed by Shiwani, HR Head.
